

Increasing Protected Areas Through Regenerative Economies

by Annie, Linnea, Maria and Inês

DISTRIBUTED ECONOMIES - MDDI 2022/2023

PROTECTION & LAND REGENERATION

OUR APPROACH

Creating a bridge between humans and nature.
Aiding indigenous groups to have guardianship
over natural areas around the world through
nature's sites becoming identities.

Why is this a need ?

To protect nature areas from exploitations from corporations,
increase biodiversity, restoring areas that have been exploited.

In 2017, **New Zealand** granted legal personhood to the **Whanganui River**. Since then,
other nations have followed suit in an effort to protect the environment

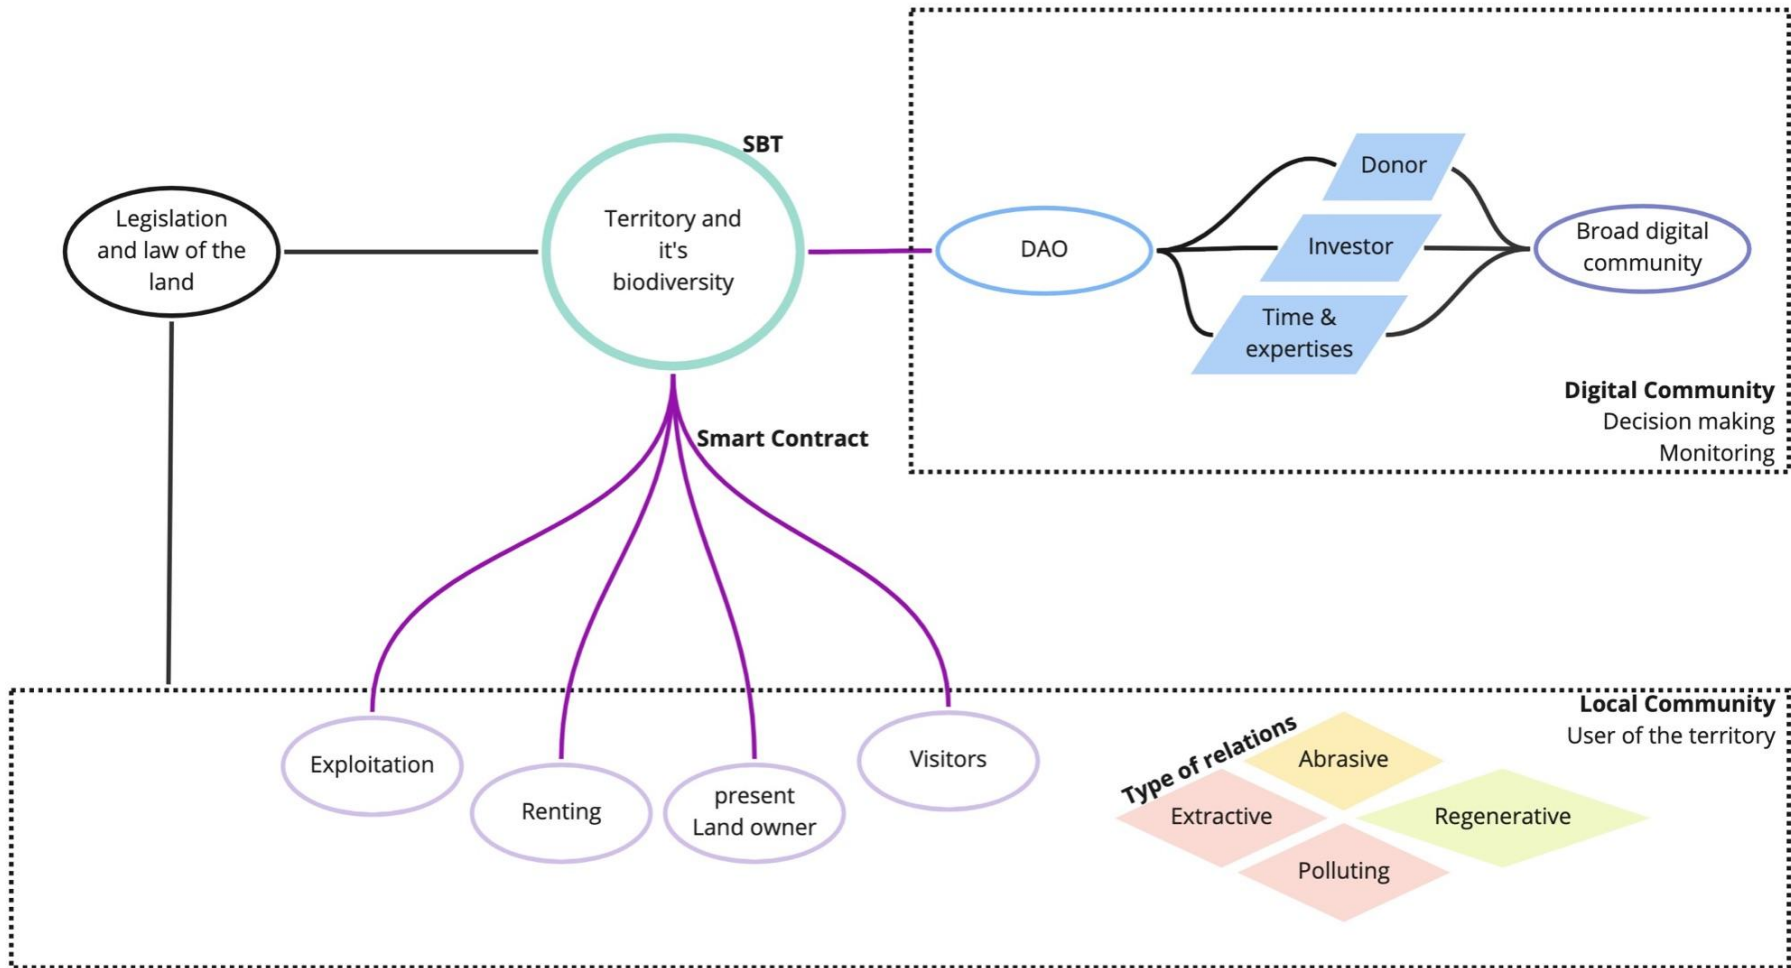

Stakeholders

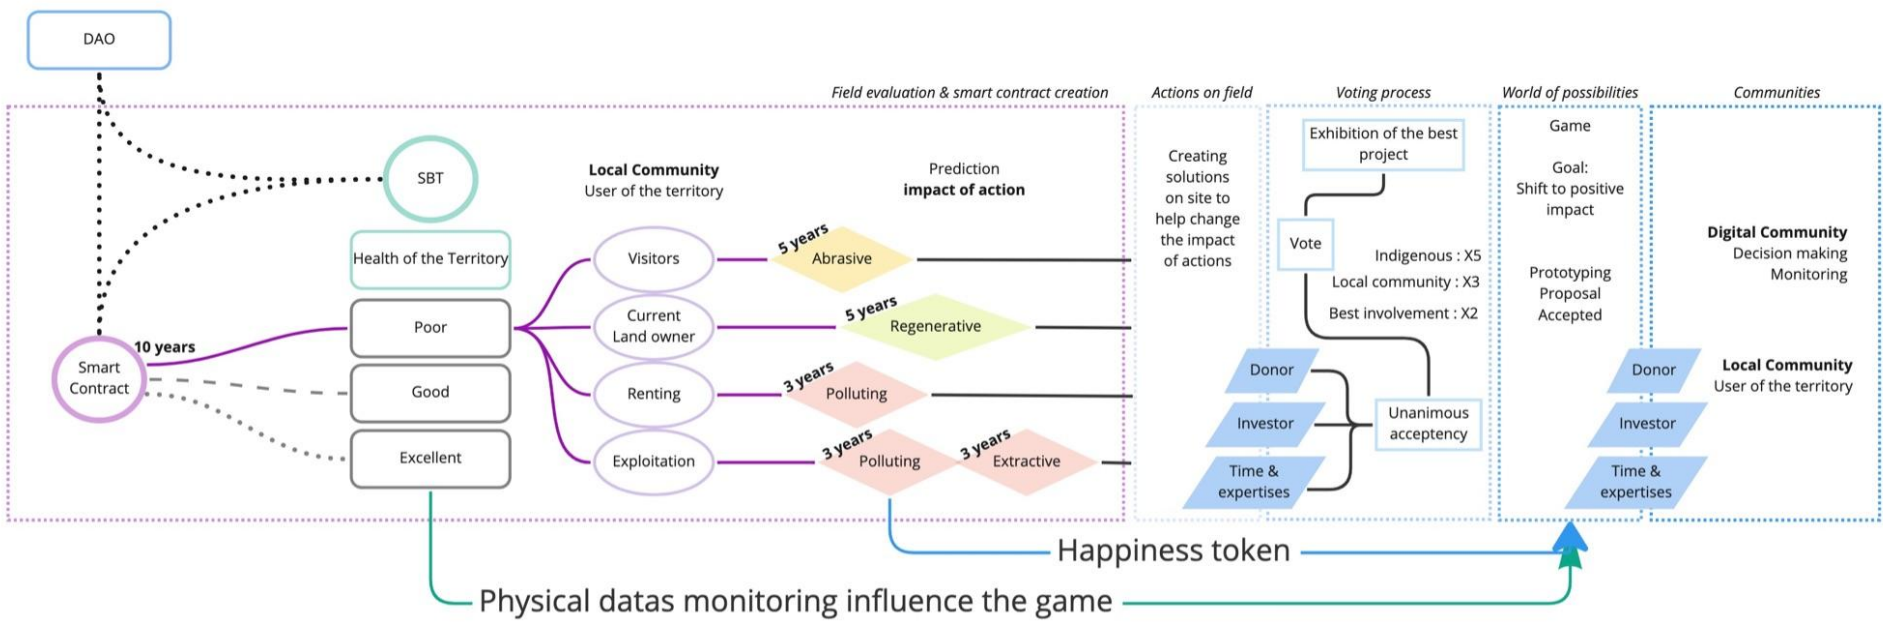

- **Eco system**
- **Indigenous People**
- **Corporations**
- **Impact investors**
- **Humanity**

HOW DOES IT WORK?

OUR PROPOSAL

Indigenous People

Eco System

DAO

Impact Investors

Corporations

A **DAO**, or “**Decentralized Autonomous Organization**,” is a community-led entity with no central authority. It is fully autonomous and transparent: smart contracts lay the foundational rules, execute the agreed upon decisions, and at any point, proposals, voting, and even the very code itself can be publicly audited.

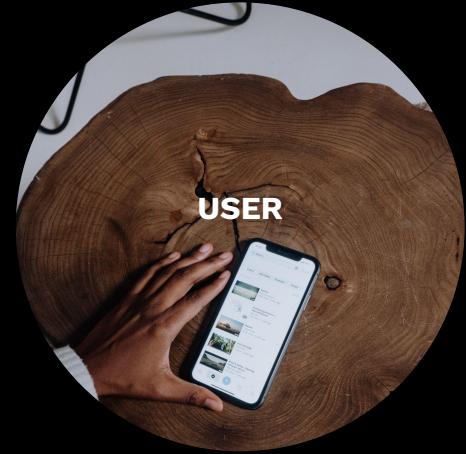

Viability

The investors gain reputational capital and the guardian/The indigenous people gain natural, financial and cultural capital.

All the components, systems, tools, platforms are already available to build a system to make this proposal viable.

Private people and Impact investors are motivated to invest in restoration projects.

Thank you!
