

2nd of December 2022

Project Name: BCNeutral

Group 3: Giulia, Linnea, Maria, Chetan, Victor

Description: Due to the over 26 thousand public recycling and garbage bins in Barcelona, a constant smell of garbage can be felt while travelling through the city. In low socio-economic areas even worse due to less frequent pick ups. We wanted to tackle this challenge through creating a bio material that would reduce and neutralise the garbage smell. We had 5 successful results; A tablet that dissolves in water reducing the bad odour with over 85%. 3 different films with varying properties and efficiencies and one liquid spray. All made from materials that are easily sourced in local supply chains in Barcelona.
